# What's the Electronic Frontier Foundation?

What's the Electronic Frontier Foundation?

- US-based non-profit full of lawyers, technologists and activists

- Focuses on digital civil liberties

- **We've been using and loving CiviCRM since October 2011**

- Issues include:
  - Free Speech
  - Fair Use
  - Privacy
  - Security
  - DRM
  - Internet Freedom
  - Jailbreaking
  - Encryption, anonymity, etc.

EFF Has Special Needs

- **Membership** logic is crazy

- The same **premiums** are offered at various prices

- We make **tons of donate pages** for different purposes

- Donate pages **must be cached**

- **Design and simplicity are very important**

- **PCI Compliance** is obnoxious

Someone Joins EFF! → **Do they have an active membership?**

Do they have an active membership? — No → **Is donation recurring?**

Is donation recurring? — Yes → **Create monthly autorenew membership**

Is donation recurring? — No → **Create membership that expires in one year**

Do they have an active membership? — Yes → **Is new donation recurring?**

Is new donation recurring? — No → **Is existing membership recurring?**

Is new donation recurring? — Yes → **Is existing membership recurring?** (lower left box)

Is existing membership recurring? (middle) — Yes → **Don't modify membership**

Is existing membership recurring? (middle) — No → **Extend existing membership by one year. Update membership type to new donation type**

Is existing membership recurring? (lower left) — Yes → **Cancel old recurring membership. Update membership to use new donation**

Is existing membership recurring? (lower left) — No → **Update membership to monthly autorenew, change expiration to +1 month**

Gift	One-Time	Recurring

Some Hacks We Had in Place

- Three versions of every membership type (one-time, recurring, variable price)
  - Total of 17 membership types in CiviCRM
- Three versions of every premium (one-time, recurring, variable price)
  - We have 7 different premiums
  - But we store 21 different premiums in CiviCRM

Too much traffic, too little caching

- On each CiviCRM contribution page load:
  - Loads Drupal into memory
  - Loads CiviCRM into memory
  - Takes lots of server resources
  - Takes lots of time
- EFF's popular action alerts get 30,000 signatures
  - 30,000 signatures = 30,000 thank you page loads = 30,000 Drupals and CiviCRMs loaded into memory (~240 gigabytes of RAM?)
  - **1 crashed web server :(**
- **Caching** solves this problem

Lots of Donate Pages

- We want to know **contribution sources**, but we don't track email clicks for **privacy** reasons

- We used to have **separate donate and join pages**

- We used to have **four versions** of each contribution page: Donate, Donate PayPal, Join, Join PayPal (CiviCRM 4.2 fixes this, yay!)

- We create a **new donate page** for each:
  - Fund-raising campaign about a **specific issue**
  - Fund-raising **appeal email**
  - **Action alert thank you** page

Ugly Hacks

- Way too many custom templates
- Hundreds of Drupal URL aliases
- Stupidly complicated node id in URL
- Hooks, hooks, hooks!
- Tons of custom JavaScript that changes everything
  - But horrible experience for NoScripters
- Skip confirmation page hack (now in CiviCRM 4.2!)
- I spoke about this at CiviCon SF in April 2012

HTTPS Everywhere

HTTPS Everywhere is a Firefox and Chrome extension that encrypts your communications with many major websites, making your browsing more secure.
Encrypt the web: Install HTTPS Everywhere today.

HTTPS Everywhere

FAQ

Creating HTTPS Everywhere Rulesets
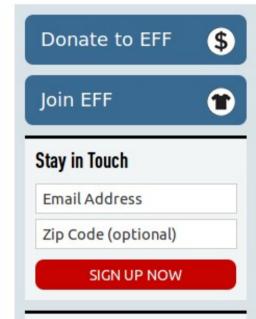

Hack On The Code

How to Deploy HTTPS Correctly

Install in Firefox
Version 2.2 Stable

Install in Chrome
Alpha Version

HTTPS Everywhere is produced as a collaboration between The Tor Project and the Electronic Frontier Foundation. Many sites on the web offer some limited support for encryption over HTTPS, but make it difficult to use. For instance, they may default to unencrypted HTTP, or fill encrypted pages with links that go back to the unencrypted site. The HTTPS Everywhere extension fixes these problems by using a clever technology to rewrite requests to these

POWER UP YOUR DONATION!

EFF is the leading organization defending civil liberties in the digital world.

Donate **now** and every dollar you give will provide **two** dollars to help EFF! Thanks to such strong support for the campaign, we were happy to offer three separate $10,000 matching grants since Thursday that provided a 4x power up. The Brin Wojcicki Foundation will continue to match donations 2x as part of their $500k EFF on Mission challenge grant.

STRIKE AGAINST CENSORSHIP
Stop the Internet Blacklist Bills

First Name   Last Name   Email

Street   City   Zip

☐ Yes, I would love to get occasional news and alerts about threats to the Internet and digital rights

TAKE ACTION NOW

The Internet blacklist legislation—known as PROTECT IP Act (PIPA) in the Senate and Stop Online Piracy Act (SOPA) in the House—invites Internet security risks, threatens online speech, and hampers innovation on the Web. Urge your members of Congress to reject this Internet blacklist campaign in both its forms! Read More

ELECTRONIC FRONTIER FOUNDATION
DEFENDING YOUR RIGHTS IN THE DIGITAL WORLD

Farewell, Authorize.net

- If you accept Authorize.net, you have to be PCI complaint (and pay auditors tons of money to find security false positives with automated tools)

- Authorize.net refuses to fix their bugs, even after we spend hours on the phone with them explaining their problem and how they can fix it (just ask Leez)

- We wanted better rates, better customer service, better development environment

Hello, Stripe!

Why you'll love using Stripe

VISA · MasterCard · AMERICAN EXPRESS · DISCOVER · JCB

Full-stack payments

You don't need a merchant account or gateway. Stripe handles everything, including storing cards, subscriptions, and direct payouts to your bank account.

Stripe.js lets you build your own payment forms while still avoiding PCI requirements.

An API that gets out of your way

It's so easy, we've embedded a bunch of examples right here. Copy some of these requests into your terminal and check out what happens.

With wrappers in Ruby, PHP, Python and more, you can get started in minutes. Learn more ›

```
$ curl https://api.stripe.com/v1/charges \
   -u J6MbbL8BchnytF40nmOwBfOaIDNkI3oZ: \
   -d amount=400 \
   -d currency=usd \
   -d "description=Charge for test@example.com" \
   -d "card[number]=4242424242424242" \
   -d "card[exp_month]=12" \
   -d "card[exp_year]=2012" \
   -d "card[cvc]=123"
```

Create a new charge ⇕ using curl ⇕

Note about Stripe

- We're now using Stripe on our donate pages!

- Joshua Walker (drastik) recently wrote a CiviCRM Stripe payment processor
  http://civicrm.org/extensions/stripe-payment-processor

- It's brand new! (we still need to test it)

- Our online store uses Ubercart, with no good Stripe module yet (we're working on it)

- They have run fun hacker challenges, just google for "stripe ctf"

So we decided to
REINVENT THE WHEEL
(sort of)

Donate Pages Outside of CiviCRM?!

- ## If we build our own system
  - We have 100% control over **look and feel**
  - We can **cache** our donate pages so they can sit behind *load balancers*, *reverse proxies*, *content delivery networks*, *clusters galore*!
    (we don't actually do all of this, but it's nice that it's an option)

- ## CiviCRM has a great API
  - Easy to push **contributions** into the database
  - We can go **crazy with membership logic**
  - Premiums **however we want them**? Sure.

WIKIMEDIA
FOUNDATION

From Wikipedia founder Jimmy Wales

Google might have close to a million servers. Yahoo has something like 13,000 staff. We have 679 servers and around 100 staff.

Wikipedia is the #5 site on the web and serves 470 million different people every month – with billions of page views.

Commerce is fine. Advertising is not evil. But it doesn't belong here. Not in Wikipedia.

Wikipedia is something special. It is like a library or a public park. It is like a temple for the mind. It is a place we can all go to think, to learn, to share our knowledge with others.

When I founded Wikipedia, I could have made it into a for-profit company with advertising banners, but I decided to do something different. We've worked hard over the years to keep it lean and tight. We fulfill our mission, and leave waste to others.

If everyone reading this donated $5, we would only have to fundraise for one day a year. But not everyone can or will donate. And that's fine. Each year just enough people decide to give.

Donation amount:

○ $5   ○ $10   ○ $20   ○ $25
○ $50   ○ $100   ○ $250   ○ Other [   ]

[Donate by credit/debit card]

[Donate via PayPal]

[Donate via Amazon]

Where your donation goes

Technology: Servers, bandwidth, maintenance, development. Wikipedia is the #5 website in the world, and it runs on a fraction of what other top websites spend.

People: The other top 10 websites have thousands of employees. We have 138 employees, making your donation a great investment in a highly-efficient not-for-profit organization.
By donating, you are sharing your information with the Wikimedia Foundation, the nonprofit organization that hosts Wikipedia and other Wikimedia projects, and its service providers in the U.S. and elsewhere pursuant to our donor privacy policy. We do not sell or trade your information to anyone. For more information please read our donor policy.

Problems donating?

Other ways to give

2011-12 Revenue and Expenses Compared with 2011-12 Plan

All amounts in USD, in millions

Legend: Monthly Actual, Monthly Plan, YTD Actual, YTD Plan

Revenue:
- $0.5 (Monthly Actual)
- $0.2 (Monthly Plan)
- $36.1 (YTD Actual)
- $29.5 (YTD Plan)

Expenses:
- $3.3 (Monthly Actual)
- $2.2 (Monthly Plan)
- $28.8 (YTD Actual)
- $28.3 (YTD Plan)

Revenue and expenses reflect unrestricted funds only.

I find this chart confusing, but those numbers are in millions USD!

Single click donations with CiviCRM

[_____] [Go]

Log in / create account (OpenID)

Summary

Creative Commons has developed a modified donation process using CiviCRM which can potentially send a contributor off to the payment processor with as little as a single click. All of the donation buttons on CC's donation page utilize this process.

There are a number of possible benefits to using this method as opposed to regular contribution pages in CiviCRM:

- The contributor (potentially) makes a single click to donate on your site. The less clicks/keystrokes the better chance someone will complete a contribution. I believe this has been empirically tested and demonstrated (??).
- You are no longer limited to designing your contribution pages within the confines/scope of Drupal and CiviCRM. You can create pages the way you want, wherever you want. This is especially nice for widgets, or anyone else wanting to help your campaign. Potentially, people can create their own donate links on their own sites ... it doesn't matter. And if you run multiple sites, you can place Donate links wherever you want on any of those sites, and it makes no difference whether it's run by Drupal, Wordpress, Joomla, or even made with static HTML.
- Tired of *Pending (Incomplete Transaction)* contribution statuses and bogus contacts for people who never completed a transaction? This method virtually eliminates those because a contact/contribution is not created in the CiviCRM database until an IPN/notification is received from the payment processor.
- As long as the "one-click" scripts are in place, the state of your CiviCRM install doesn't really matter from a user perspective, at least as it relates to contributions. This has been useful for CC when upgrading -- not having to worry about disrupting live contributions should an upgrade encounter problems.

The system is currently comprised of two files: a class file which contains all the code, and a simple router/wrapper script which receives and routes incoming requests:

http://wiki.creativecommons.org/Single_click_donations_with_CiviCRM (thanks, nkinkade!)

What We Came Up With

- Creative Common's **OneClick code**, heavily hacked, customized, and added Stripe support

- Drupal content types: **Donate Page**, **Premium**

- **Custom panels panes** defined in code, including donate form that displays, validates, and hooks into OneClick

- Panels **node_view variants**: Donate Page, Action Alert Thank You Donate Page

- Lots of JavaScript, CSS, and images
